

A world's leading industrial technology company based out of Germany, manufacturers of internal combustion engines to the world's most powerful and efficient aero-engines.

### Business Problems

Client had huge number of word documents downloaded from external systems each day. They wanted an automated process to split each file into 2 separate PDF's and upload them to SharePoint system into two different locations with distinct folder for each file.

### SOAIS Solution & Benefits

SOAIS Team automated this process and the BOT was scheduled to run every morning. It used to split every word file into 2 PDF files with certain criteria and content. Then both PDF files were uploaded to SharePoint at 2 different locations with a prefix for each file.

This helped client to get their job done unattended instead of having dedicated resource to do this.
