

A US based leading manufacturer of products for the life science research and clinical diagnostics markets

Business Problems

Customer used to get orders for Red Blood Cells products for which they have to go through all the required regulatory documentation and quality checks. This involved their different teams from Manufacturing, Logistics, QM, Export, Shared Services, etc. to work on this requirement and finally send the end-product with all the quality parameters in place.

SOAIS Solution & Benefits

SOAIS team worked with Customer and their different teams (PTM, LEX, OTC, RTR, PLM) to get this process automated by bridging all the gaps and having one end to end automated process which handles all team efforts and saves lot of time.

Manually done, it used to take almost 2 weeks. Now Automation does it in 1 hour 30 minutes.
