SOAIS
Putting Customers First

A US based leading manufacturer of products for the life science research and clinical diagnostics markets

Business Problems

The business users needed the information on the blocked data from their SAP Application (VBREVE table) for further analysis. To extract the data from SAP Application and filter only the blocked ones itself involved lot of manual effort. The volume of data is huge as this activity is done monthly.

SOAIS Solution & Benefits

SOAIS Team worked with Customer and created an on-demand bot for data extraction from SAP Application and filtering the same on business provided criteria. Now the blocked data was available to the business users in an excel for their further analysis.

Automation saved a week of manual effort to just 15 minutes of process execution
